## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-9 and 12-27, drawn to an apparatus for securing the firing of a shot from a firearm and a munition containing said apparatus.

Group II, claim(s) 29 and 31, drawn to a method for securing cartridges for firearms.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical feature. The special technical feature of Group II is the determining of a cartridge password *on the basis of a received cartridge identity* and subsequent transmission of said password to a control means for comparison to a password stored in said control means. Group I does not require this special technical feature since the received/releasing data is not necessarily determined on the basis of the received cartridge identity, and could be construed as being determined on the basis of other received data such as data originating from a remote transponder or biometric sensor as is well known in the art (see Brosow, US patent 6760992; and Miles US patent 6283034).
